

Requirement: Users should be able to register a new account

Test Case Name: User Registration

Objective 1: Verify that the user can register as a landlord

Action: In the user registration interface, click the 'Landlord' button, then enter the username, email, phone number, password, and click the 'Register' button.

Output: Check if the user successfully registers. If successful, redirect to the login interface; if failed, redirect back to the registration interface.

Objective 2: Verify that the user can register as a tenant

Action: In the user registration interface, click the 'Tenant' button, then enter the username, email, phone number, password, and click the 'Register' button.

Output: Check if the user successfully registers. If successful, redirect to the login interface; if failed, redirect back to the registration interface.

Requirement: Users should be able to log in using an existing account

Test Case Name: User Login

Objective: Verify if the user can successfully log in

Action: In the login interface, enter the username or email and password, then click the "Login" button.

Output: Check if the account exists and the password matches. If it does not exist or does not match, show login failure; if it exists and matches, redirect to the main interface.

Requirement: Landlords should be able to upload contracts and send them to a designated tenant

Test Case Name: Upload Contract (and similar files)

Objective 1: Verify that the landlord account can add a designated tenant as a recipient

Action: In the contacts interface, click the '+' button, redirect to the add interface, enter the tenant's email or phone number, and click 'Confirm'.

Output: Check if the account exists and is a tenant type. If it exists, the tenant will be added to the contact list and the user will be redirected to the contacts interface; if not, redirect back to the add interface.

Objective 2: Verify that the landlord can access the contract upload interface

Action: In the contacts interface, click the contact in the left-side menu, then click the 'Upload' button in the top-right corner of the screen.

Output: A pop-up interface appears, containing required fields and the file upload function.

Objective 3: Verify that the landlord can upload a contract

Action: In the contract upload interface, input the property type, address, contract effective date, rental period, monthly payment amount, payment date, and click 'Upload File'.

Output: Check if the upload is successful. If successful, redirect to the tenant

contact interface and send the file to the tenant; if failed, close the pop-up window and show upload failure.

Requirement: Tenants should be able to receive and send back contracts

Test Case Name: Return Contract

Objective: Verify that the tenant can download the contract sent by the landlord

Action: In the contacts interface, click the contact in the left-side menu and click the file.

Output: Check if the file was successfully uploaded by the landlord; if successful, redirect back to the tenant contact interface and send the file back to the landlord; if failed, show upload failure.

Requirement: Landlords and tenants should be able to accept each other's contract signatures and download the contract

Test Case Name: Confirm Contract

Objective 1: Verify that the landlord/tenant can download their own uploaded contract

Action: In the contact interface, click the successfully uploaded file.

Output: Download the file.

Objective 2: Verify that the landlord/tenant can access the contract download and acceptance interface for the contract uploaded by the other party

Action: In the contact interface, click the contract uploaded by the tenant/landlord.

Output: A pop-up window appears containing the 'Download' button and the 'Accept Signature' button.

Objective 3: Verify that the landlord/tenant can download the contract uploaded by the other party

Action: In the download and acceptance interface, click the 'Download' button.

Output: Download the file.

Objective 4: Verify that the landlord/tenant can accept the contract signature sent by the other party

Action: In the download and acceptance interface, click the 'Accept Signature' button.

Output: Check if the acceptance is successful. If successful, return to the contact interface and display the accepted contract with a '✓' mark next to it.

Requirement: After both parties accept the contract signatures, the property and rent information should automatically appear in the rent management interface

Test Case Name: Rent Generation

Objective: Verify that the property and rent information of the accepted contract appears in the rent management interface

Action: Both the landlord and tenant complete the acceptance of the contract.

Output: The rent management interface displays the property and rent information from the contract.

Requirement: Tenants should be able to pay the rent

Test Case Name: Rent Payment

Objective 1: Verify that tenant users can access the rent payment interface for a specific property

Action: In the rent interface, click on the property.

Output: Redirect to the rent payment interface.

Objective 2: Verify that tenant users can pay the rent for the current month

Action: In the rent payment interface, enter name, phone number, email, payment information (card number, CVC, etc.), billing address (address, postal code, etc.), and click the 'Complete Payment' button.

Output: Check if the payment is successful. If successful, redirect to the rent interface and display payment success; if failed, return to the rent payment interface and display payment failure.

Requirement: Landlords should be able to view the rent payment status

Test Case Name: Rent Payment Status

Objective: Verify that landlord users can access the rent payment status interface for a specific property

Action: In the rent interface, click on the property.

Output: Redirect to the rent payment status interface.

Requirement: Tenants should be able to report issues with the property

Test Case Name: Issue Reporting

Objective 1: Verify that tenant users can access the issue reporting interface

Action: In the report interface, click the '+' button.

Output: A pop-up window appears containing property selection, issue type, issue description, and image upload options.

Objective 2: Verify that tenant users can submit an issue report

Action: In the issue reporting interface, select the property, issue type, input issue details (click 'Upload Image' to upload images), then click 'Submit'.

Output: Check if the submission is successful. If successful, return to the report interface and display the submitted issue; if failed, return to the issue reporting interface and display submission failure.

Objective 3: Verify that tenant users can check if the issue has been resolved

Action: In the report interface, click on the issue.

Output: A pop-up window appears showing issue details and resolution status.

Requirement: Landlords should be able to view and resolve issues reported by tenants

Test Case Name: Issue Handling

Objective 1: Verify that landlord users can view the issue reported by a tenant

Action: In the report interface, click on the tenant's issue.

Output: A pop-up window appears showing issue details and a 'Mark as Resolved' button.

Objective 2: Verify that landlord users can mark the issue as resolved

Action: In the issue pop-up window, click the 'Mark as Resolved' button.

Output: Check if the issue is successfully marked as resolved. If successful, return to the report interface and display it as resolved.
